

Dr. Nuria Canibe, Aarhus University

Dr. Nuria Canibe received her veterinary degree in 1990 at the University of Zaragoza, Spain, and in 1995 my Ph.D. degree at The Royal Veterinary and Agricultural University, Denmark. Her main research activity is the impact of feeding strategies or feed additives on microbial ecology of the gastrointestinal tract of pigs with the aim of reducing the use of antibiotics and heavy metals while maintaining a high growth performance and animal health. Feeding strategies, like fermented liquid feed, dietary addition of organic acids, plant materials, and probiotics, and feed processing have been in focus.
